# MEDICAL CONDITIONS AT CURTEA DE ARGEŞ

CURTEA DE ARGEŞ is a small town of 6,831 inhabitants (in 1930), situated in the valley of the River Argeş, at an altitude of 1,400 feet.

A SERIES of wells supply the town with water, there being no system of pipes to supply running water. The drainage system is necessarily of a primitive type, the dry closet type being the one in use.

THE TOWN possesses two hospitals:

(1) A general hospital with pavilion for epidemic cases.
(2) Home for incurables—a branch of a nerve clinic in Bucharest.

THE GENERAL HOSPITAL is situated in the centre of the town on a slight eminence, a few yards from the main street. It consists of two wards, one for men and one for women. The cases are mixed, medical and surgical cases being nursed in the same ward. There are fifteen beds for men and fifteen for women. In addition there are two small wards for clean surgical cases, each containing two beds.

THE BEDS are of the usual hospital type, but placed close together about three feet apart. The mattresses and pillows are stuffed with straw and are very hard. The patients wear their own clothes. This being summer, less than one half of the beds were in use. The villagers refuse to come to hospital in summer, when there is work to be done in the fields, unless in cases of stern necessity. A belief in witchcraft and secret remedies is prevalent, so that progress as regards treatment is hampered. Epidemics of dysentery and typhoid are common. Tuberculosis is widespread, and goitre is found in all the villages in this valley. Cretinism in the children is untreated, and most villages contain cases. No medication of the water supply is undertaken. Pulmonary tuberculosis is treated in sanatoria, but other cases of tuberculosis are admitted here. Cancer is also common, but is not dealt with here—the cases are sent to Bucharest for radium treatment.
